

TO: Raymond Flick and Wilma Ames File  
FROM: Ted Baldwin, Hydrologic Engineer  
SUBJECT: Water Right Problem

On August 24, 1978, I accompanied Ray Owens, Upper Sevier River Water Commissioner on a trip to Circleville, Utah. One purpose of the trip was to talk with Scott Smith, a Sevier River gate man, concerning the Flick and Ames water right problem.

While we were with Mr. Smith, he made the statement that it was not his place to say who did or did not receive water, this was a matter to be determined by the River Commissioner and the State Engineer's Office.

After Scott Smith had looked over the documentation prepared by Don Norseth, Directing Distribution Engineer, Mr. Smith stated he would deliver the water in question as adjudicated by the Cox Decree.

Mr. Smith also indicated he did not feel this water right was correct, and he was considering going into the matter further through Mr. Stan Adams, Area Engineer for the Sevier River Area.
